

Utah's Deadly Seven

Snakes are often feared and misunderstood. Venomous snakes have the potential to be deadly but out of 8,000 venomous snakebites a year only about 5 are fatal.

- All snakes can bite if they feel threatened.
- To prevent snakebites don't handle a wild snake and wear high boots when hiking.
- If you are not sure if the snake is venomous, do not try to pick it up.

Sidewinder
Crotalus cerastes

Speckled Rattlesnake
Crotalus mitchellii
